### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on July 16, 2010 has been entered.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7 and 17-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Fernandez (U.S. Publication No. 2005/0165400).

Fernandez discloses a plate (1) having a unitary body with at least one opening (5) having a spherical curvature (Fig. 6) extending at least partially through the thickness of the plate; at least one fastener (8) having a head that interferes with a interference point (6) of the plate; wherein the head is capable of engaging with and

Application/Control Number: 10/826,285

Art Unit: 3775

passing the interference point to communicate with the spherical curvature, wherein the interference point is located at an upper portion of the at least one opening (Fig. 6) and wherein the interference point includes a plurality of relief areas and a plurality of engagement areas (see Figure 1 below). The relief areas are diametrically opposed (Figure 4). The relief area comprises less that about 40 and 30 % of the interference point. The spherical curvature includes tangents from an outer most portion of the spherical curvature of the plate that intersect at angles between 1 and 5 degrees. The fastener head comprises a partially spherical outer surface corresponding to the spherical surface of the plate opening, at least one slit (thread) located on the fastener head. With regard the statement of intended use and other functional statements, they do not impose any structural limitations on the claims distinguishable over Paul which is capable of being used as claimed if one so desires to do so. In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963). Furthermore, the law of anticipation does not require that the reference "teach" what the subject patent teaches, but rather it is only necessary that the claims under attack "read on" something in the reference. Kalman v. Kimberly Clark Corp., 218 USPQ 781 (CCPA 1983). Furthermore, the manner in which a device is intended to be employed does not differentiate the claimed apparatus from prior art apparatus satisfying the claimed structural limitations. Ex parte Masham, 2 USPQ2d 1647 (1987).

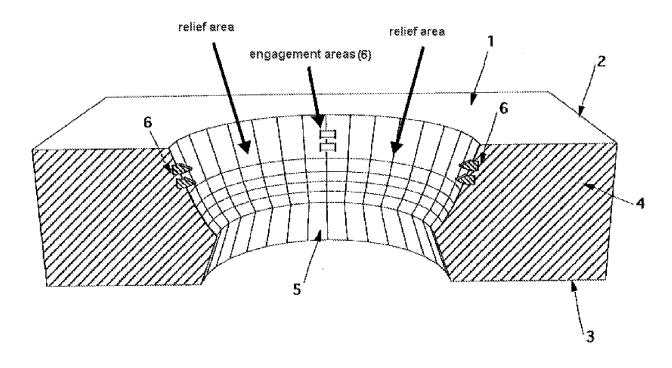

Figure 1

## Allowable Subject Matter

Claims 8 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Response to Arguments

Applicant's arguments with respect to claims 1 and 17 have been considered but are moot in view of the new ground(s) of rejection. The amendment overcame the previous rejection because the interference point did not include a plurality of relief areas and engagement areas.

Art Unit: 3775

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL J. ARAJ whose telephone number is (571)272-5963. The examiner can normally be reached on M-F 8am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Barrett can be reached on 571-272-4746. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
